INTERNAL · COMPREHENSIVE DRAFT V0.2

MV Business Brand Guide

Stakeholder-aligned system for how the metroidvania toolchain company speaks, looks, and proves credibility—in product, marketing, and public narrative.

Version 0.2 · April 2026

Sources: Strategy, Marketing, Design, Engineering, Game, Legal/Finance charters and docs/brand-charter.html, STYLE_GUIDE.md

PDF: regenerate with python3 scripts/html_to_pdf.py docs/mv-business-brand-guide-pamphlet.html artifacts/MV-Business-Brand-Guide-v0.2-2026-04-02.pdf

1. Document control

1.1 PURPOSE

This guide is the **operational brand system** for the MV business: naming hierarchy, messaging architecture, voice rules, visual tokens, channel behavior, and claim discipline. The **Company Brand Charter** (`docs/brand-charter.html`) remains the concise executive anchor; this document expands it for day-to-day use by Marketing, Design, and founder-led DevRel.

1.2 AUTHORITY

- **Visual execution in product UI:** Design owns `STYLE_GUIDE.md` exclusively. No off-token colors, spacing, or radii in tools.
- **Positioning and public copy:** Marketing owns voice, channels, and message testing; Strategy advises competitive framing; Founder approves major commitments.
- **Truth of product:** Engineering and Game Director / Level Design constrain what may be claimed externally.

1.3 STAKEHOLDER REVIEW MATRIX (V0.2)

Each owner confirms their column before we treat v0.3 as “locked” for external use.

SECTION	FOUNDER	STRATEGY	MARKETING	DESIGN	ENGINEERING	GAME / LD
Strategic foundation & assumptions	☐	☐	—	—	—	☐
Portfolio & naming	☐	☐	☐	☐	—	☐
Messaging & positioning claims	☐	☐	☐	—	☐	—

Visual & marketing surfaces	—	—	☐	☐	—	—
Claims / AI / legal guardrails	☐	—	☐	—	☐	—
Game IP vs toolchain brand	☐	—	☐	☐	—	☐

1.4 REVISION LOG

VER	DATE	NOTES
0.1	2026-04-02	Initial pamphlet (too thin for stakeholder use).
0.2	2026-04-02	Expanded: JTBD, messaging ladder, voice examples, full token summary, channel/DevRel, governance.

2. Strategic foundation (Strategy)

2.1 NORTH STAR

Help solo developers and small teams ship **high-quality 2D metroidvanias and platformers** without losing months to disconnected tooling. Defensibility is the **integrated pipeline** (sprites → rooms → world graph → export) plus **AI that proposes structured output for human approval**—not silent mutation of authored content.

2.2 TOOL + GAME FLYWHEEL

- **Proof by production:** *Ashen Hollow* demonstrates that the Workbench produces shippable game content, not toy demos.
- **Compounding infrastructure:** Workbench investment accelerates every future title in the game library.
- **Credible narrative:** “Built by game developers, for game developers” requires evidence; the game library is the evidence.

2.3 PLATFORM CHOICE (WEB-FIRST)

Strategic intent: Browser delivery reduces install friction, enables shareable URLs and embeddable demos, and reaches users on locked-down machines. Tradeoffs (offline, filesystem, performance ceilings) are engineering problems to mitigate—not reasons to abandon the acquisition advantage without a deliberate Strategy decision.

2.4 ASSUMPTIONS TO MONITOR

- Demand for AI-native creative workflows in indie gamedev continues to grow.
- Model capability for spatial / layout assistance improves faster than commodity “full auto level gen” commoditizes trust.
- Differentiation remains **integrated workflow + human-directed AI**, not a single-feature demo.

Revisit quarterly with Strategy if a major platform ships a directly comparable integrated toolchain or if AI level-gen positioning floods the narrative.

3. Portfolio & naming

3.1 PRODUCT STREAMS

STREAM	WHAT IT IS	BRAND ROLE
Workbench	Browser toolchain: sprite workbench, room layout editor / wizard, world utilities, exports.	Primary B2D (developer) brand surface. Emphasize craft, control, and pipeline.
Game library	Titles led by *Ashen Hollow* (dark-fantasy metroidvania).	Proof, emotion, and community hook. Marketing for the game may use richer narrative tone than tool UI.
Agent OS / internal	Founder operating system, dashboards, agent charters.	Not a customer-facing product brand; keep separate in public copy unless deliberately “building in public” about process.

3.2 CANONICAL NAMES (PROVISIONAL UNTIL FOUNDER LOCKS)

OBJECT	PREFERRED PUBLIC NAME	NOTES
Company / umbrella	“MV” or expanded name TBD	Legal entity and consumer-facing company name require Founder + Legal.
Toolchain	Metroidvania Workbench / MV Workbench	Aligns with repo language; avoid implying a shipped “suite” beyond what exists.
AI feature family	Copilot, Environment Copilot	Use the same terms as in-product; tie to “propose → review → apply.”
Flagship game	Ashen Hollow	Creative IP: follow `artifacts/ashen-hollow-art-bible-v0.2.md` for world art direction—not tool UI tokens.

4. Audience & jobs-to-be-done (Marketing)

4.1 CORE JOB (JTBD)

Users are not hiring the product to “place tiles.” They are hiring it to **ship a game they are proud of without getting stuck in tooling for months**. Three dimensions must appear in serious messaging:

DIMENSION	JOB	MESSAGE HOOK
Functional	Correct structure, reliable exports, sane data for engine import.	“Structured rooms and worlds you can trust in your pipeline.”
Emotional	Feel competent and in control—not dependent on opaque AI.	“AI-assisted, human-directed. Nothing applies until you say so.”
Social	Show work-in-progress with pride; pass the “not slop” sniff test.	“Devlog-friendly: real UI, real iteration, real craft.”

4.2 ADOPTION LIFECYCLE

Now — early adopters: Technically sophisticated; tolerate rough edges; value authenticity and visible iteration over glossy promises.

Next — early majority: Need reliability, documentation, proof, and polish. **Marketing must not optimize conversion** before this group has reasons to trust.

4.3 ANTI-PERSONAS (DO NOT OPTIMIZE FOR)

- Builders who want **fully automated world generation** with no authorship—that is a different product category.
- Audiences who expect **guaranteed playable AI output**; we explicitly do not promise that.

5. Positioning & messaging architecture

5.1 PILLARS (USE IN DECKS, SITE, LONG POSTS)

1. **Integrated pipeline** — Sprite, room, and world authoring connected for metroidvania-scale projects.
2. **Human-directed AI** — Suggestions and drafts; explicit review before data hits your files.
3. **Proof by shipping** — We eat our own cooking: *Ashen Hollow* and future library titles.
4. **Web-native workflow** — Low friction to try; shareable; no install cliff for many users.

> **Line we own (tagline-class):** “AI-assisted, human-directed metroidvania tooling—from pixels to rooms—proven by the games we ship.”

5.2 ELEVATOR LENGTHS

LENGTH	COPY
~25 words	We build browser tools for 2D metroidvanias: sprites, rooms, world layout, export. AI proposes changes; you approve. We prove it by shipping our own game, Ashen Hollow.
~50 words	MV is a metroidvania-focused workbench in the browser—sprite animation, room editing, world graph, exports. Copilot-style AI helps draft environment and layout ideas, but nothing applies without your review. Unlike generic map editors, we optimize for the full 2D exploration game loop. Ashen Hollow is our living proof.

5.3 COMPETITIVE FRAME (TALK TRACKS)

ALTERNATIVE	THEIR STRENGTH	OUR CONTRAST
Tiled	Mature OSS, huge ecosystem	General 2D maps; not a unified sprite→room→AI-assist story for metroidvania workflows.
LDtk	Excellent 2D editor UX, indie trust	Manual-first; no single integrated Copilot + cross-tool pipeline narrative.
Godot / Unity editors	Deep engine tie-in	We sit upstream: engine-agnostic authoring and export-first mental model.
Aseprite	Pixel art standard	Art authoring, not room/world + AI layout assistance as one product story.
Emerging AI “level gen”	Novelty, automation hype	We compete on *authorship + leverage*, not replacing the designer.
GDevelop / no-code	Beginner reach	Different segment: we target developers pursuing a higher craft ceiling in a specific genre.

6. Voice, tone & DevRel (Marketing)

6.1 VOICE PRINCIPLES

- **Practitioner-first:** First-person or small-team perspective; concrete technical detail beats slogans.
- **Honest limits:** Show wrong Copilot suggestions and fixes—credibility beats polish theater.
- **Give before take:** Standalone insights on metroidvania design, room graphs, or AI workflow earn attention; pure pitches do not.
- **No fake corporate "we're thrilled to announce":** Indie devs filter that out instantly.

6.2 LANGUAGE GUARDRAILS (2026)

PREFER	AVOID
AI-assisted; suggests; proposes; review and apply	AI-powered magic; autopilot; "instant levels"
Shipped; in preview; experimental	Vapor features; roadmap as if released
Screen recording / GIF of real UI	Stock game imagery; generic cyberpunk grids

6.3 BEFORE / AFTER (EXAMPLES)

WEAK	STRONGER
"Our revolutionary AI builds your entire metroidvania."	"Copilot drafts room environment JSON from your prompt—you preview, edit, then apply. If it's wrong, that's normal; iteration is the workflow."
"All-in-one game engine replacement."	"Authoring toolchain for layout and data—export and take it to the engine you already use."
"Never get stuck again."	"Fewer dead ends in room spec and environment setup; you still own design decisions."

6.4 CHANNELS & FORMATS (PRIORITY ORDER)

CHANNEL	ROLE	BEST FORMAT
itch.io devlog	Archive of trust; long-form depth	Build logs with failures + fixes; Q&A headings for AEO
X / Twitter	Reach, Screenshotsaturday	15–60s video or GIF > stills without context
GitHub README	Technical credibility	Accurate scope, setup, honest limitations
Discord / forums	Community presence	Help others first; soft mention of tool when relevant

Cadence (Marketing charter): ~3–5 touchpoints/week sustainable for solo founder; consistency beats bursts.

7. Claims, AI & legal discipline

7.1 NON-NEGOTIABLE “NEVER CLAIM”

- Features not shipped or not reliable in production.
- Deterministic “always playable” AI output.
- Pricing, tiers, or refunds without Founder + Finance/Legal.
- That AI replaces authorship or silently changes game runtime without user action.
- Probabilistic AI behavior described as guaranteed.

7.2 ENGINEERING SIGN-OFF RULE

Any public claim touching exports, Copilot behavior, performance, or browser support should be **traceable to shipped behavior** or labeled as experimental. When in doubt, Marketing runs the `positioning-review` action from the Marketing charter before publish.

7.3 PRODUCT-LED GROWTH HOOKS

- **First-session win:** First meaningful export or saved room as the activation story—not just “signed up.”
- **Shareability:** Layout screenshots and Copilot clips should look recognizably “real tool,” not mockups.

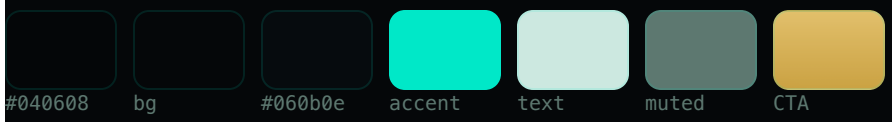
8. Visual identity (Design)

8.1 DESIGN PHILOSOPHY (SUMMARY)

- **Dark precision-tool aesthetic** — professional creative software, not marketing landing page noise.
- **Single cyan accent** (`#00e8c8`) for active, selected, focused interactive states.
- **Gold gradient** reserved for primary CTA and select marketing emphasis—not general buttons.
- **Opacity layers** preferred over heavy shadows; **neutral shadows only** (black rgba).
- **No light mode** in product UI; do not introduce light-mode building blocks.

8.2 CORE TOKENS (PRODUCT & MARKETING)

TOKEN	VALUE / ROLE
`--bg`	`#050709` page background (also `#040608` / `#060b0e` gradient variants in guide)
`--panel`	`rgba(4,6,10,0.96)` primary panels
`--accent`	`#00e8c8` interactive emphasis
`--text` / `--muted`	`#cce8e0` / `#5d7870`
`--line`	rgba cyan hairlines for dividers and borders
`--good` / `--warning` / `--error`	Semantic UI states only



8.3 TYPOGRAPHY

ROLE	FONT	SCALE NOTES
Display	Bebas Neue	Panel titles, hero headlines; weight 400; letter-spacing 0.04em+
UI / body	Plus Jakarta Sans	11–22px token scale only; body 14px default
Data / code	DM Mono	Coordinates, JSON, hex readouts
Branding only (optional)	Iowan Old Style / Georgia stack	Per STYLE_GUIDE; not for tool UI chrome

8.4 SPACING, RADIUS, MOTION (NON-OPTIONAL RULES)

- **Spacing:** Multiples of 4px only; established exceptions (e.g. 10px button padding) per STYLE_GUIDE.
- **Radii:** Use token scale (`--radius-tight` 14px for buttons/inputs; `--radius-card` 18px for panels; `--radius-full` for pills).
- **Motion:** 120ms / 200ms; `ease` or `ease-out`; hover lift `translateY(-1px)` max; never `transition: all`.
- **Canvas:** `image-rendering: pixelated` on pixel art surfaces.

- **Accessibility:** WCAG 2.2 AA target; visible `:focus-visible`; min hit targets 44px standard / 28px compact toolbar; do not use color as sole state differentiator.

9. Editor domain colors & game IP boundary

9.1 ENTITY COLORS (ROOM / WORLD EDITOR ONLY)

From STYLE_GUIDE §11 — use for tool indicators and entity chips, not arbitrary marketing decoration.

ENTITY	HEX	NOTE
Platform	`#77b8ff`	Square indicator
Door	`#f5986e`	Round
Vertex	`#ff6b8a`	Round
Key	`#4ade80`	Round
Ability	`#a78bfa`	Round
Mover	`#fbbf24`	Round
Start Point	`#f0abfc`	Round

9.2 ASHEN HOLLOW VS WORKBENCH

Do not conflate in-game mood, lore, and environmental palette with toolchain UI tokens. Game marketing may be atmospheric and narrative-forward; tool marketing must stay precise and restrained. Cross-reference the art bible for in-world direction; cross-reference STYLE_GUIDE for UI.

> **Practical rule:** Screenshots of *Ashen Hollow* gameplay sell the dream; screenshots of the Workbench sell the workflow. Label which is which in posts.

10. Marketing & splash surfaces

Hero pages may use layered gradients and ambient cyan/gold **radial highlights** per STYLE_GUIDE §12, still composed from approved tokens. Marketing CTAs may use slightly taller min-height (e.g. 46px) but same motion and radius discipline.

10.1 OPEN QUESTIONS FOR FOUNDER (V0.3 LOCK)

1. Final **company / product legal and display names**.
2. Official **logo** vs text lockup vs abstract mark.
3. Whether **"freemium SaaS"** direction (Strategy recommendation) is affirmed before any pricing copy exists.
4. Primary **single home** for long-form updates (itch devlog vs blog) for the next 90 days.

10.2 DESIGN + MARKETING JOINT CHECKLIST BEFORE EXTERNAL LAUNCH

- ☐ All colors map to tokens (no one-off hex in components).
- ☐ Typography loads Bebas + Jakarta + DM Mono on every new surface.
- ☐ Copy passes AI claim and vaporware checks.
- ☐ At least one **real screen recording** asset prepared for the same message as landing copy.

End of v0.2 · For questions, route through Founder → Marketing / Design per charter.
